SciTOX Announces Market Release of a New Toxicity Analyzer

[Christchurch, New Zealand] — [20 April 2009]—SciTOX announces the market release of their first toxicity analyzer, the ALPHA.

Using technology exclusively licensed from Lincoln Ventures Limited (LVL), in New Zealand, the ALPHA offers a unique, low-cost analysis for toxicity in aqueous samples, and is initially focused on the wastewater treatment market.

According to Ralph Wattinger, the CEO and Managing Director for SciTOX, “The ALPHA represents a departure from many types of wastewater analysis, as it is a technology adapted specifically for this market and for the lowest possible cost of ownership. In addition, SciTOX will devote significant technical resources towards the development and release of additional platforms and applications for toxicity analysis over the coming months.”

Rapid Toxicity Measurement Systems (RTMS) provide wastewater customers with an early warning of potential upsets to their treatment systems, reducing the risk of non-compliant discharges and higher operating costs. The toxic response measured by the ALPHA applies to organic and inorganic toxins. The ALPHA, and future platforms marketed by SciTOX will be employed in laboratories, in-process, and in field applications.

Graeme Robertson, the President of LVL, stated “We are proud to see the commercialization of this technology initially developed and patented by LVL, focused on customers’ need for rapid and reliable toxicity analysis.”

SciTOX promotes and supports their products through established, trained distribution offices globally. Seminars and customer demonstrations are offered throughout the world. Details for these, and contact information for every distributor can be obtained by visiting the SciTOX website at www.SciTOX.com.

About SciTOX Limited

SciTOX Limited, based in Christchurch, New Zealand, is a global provider of toxicology analyzers combining innovative technology and engineering with market-specific applications, providing their customers with effective, low cost-of-ownership solutions.
